

Lab Task#3

Note: All statements should be commented. Plagiarism will get straight zero.

Question 1

Write a program to calculate an electricity bill based on units consumed:

- First 100 units: 5 rupees per unit
- Next 100 units (101 to 200): 8 rupees per unit
- Above 200 units: 12 rupees per unit
- If the total bill is more than 2000 rupees, add a 15% extra tax to the bill.
- Print the total bill.

Question 2

Write a program to check if a student qualifies for a scholarship:

- If a student has a disciplinary issue (`has_discipline_issue = True`), print "Scholarship Denied due to disciplinary record."
- Full Scholarship (100%): `Marks >= 90 AND Attendance >= 85`
- Half Scholarship (50%): `(Marks >= 75 AND Attendance >= 80) OR (Is Sports Student = True AND Attendance >= 75)`
- Otherwise: Print "No scholarship granted."

Question 3

Calculate the final cost of an online order based on coupons and membership:

- Coupons:
 - "SAVE10": 10% discount on cart total
 - "SUPER50": Flat 50 rupees discount
 - Any other coupon: 0 discount and print "Invalid coupon code"
- Shipping:
 - Free shipping if customer is a premium member OR if bill after discount is 1000 rupees or more.
 - Otherwise, shipping costs 100 rupees.

Question 4

Write a program to simulate an ATM cash withdrawal using nested `if` statements:

- Check if `entered_pin` matches `correct_pin`. If wrong, print "Incorrect PIN. Access denied."
- If PIN is correct, check if `withdraw_amount` is greater than `balance`. If so, print "Insufficient balance."
- If balance is enough, check if `withdraw_amount` exceeds `daily_limit` (5000). If so, print "Daily withdrawal limit exceeded."
- If all checks pass, subtract money from balance and print "Withdrawal successful!" and the remaining balance.
